

• MODERN PRIVATE CLOUD • POWERED BY NUTANIX

Spend less. Migrate safely. Own what comes next.

STELLAR PRIVATE CLOUD • POWERED BY NUTANIX

The virtualization stack you inherited keeps getting more expensive and less yours — renewal letters that double overnight, licenses for every layer, and upgrades that cost you weekends. Stellar runs your workloads on Nutanix: a modern private cloud with **the hypervisor included**, predictable economics, and the freedom to run and move anything. And **we handle the move** — so switching costs you sleep, not uptime.

THREE REASONS TO MAKE THE MOVE

Cut the licensing tax

Nutanix includes the AHV hypervisor — no separate license, no per-core renewal shock. Collapse compute, storage, and virtualization into one platform and one predictable bill that scales with you, not against you.

Hypervisor included

No per-core tax

Up to 60% lower TCO

Migrate without the fear

The reason most teams stay overpriced is the fear of moving. Stellar plans, tests, and executes the entire cutover. Workloads run side-by-side, every step has a validated rollback, and you move with zero production downtime.

Zero downtime

Validated rollback

Stellar-managed

Freedom to run anything

One platform for VMs, containers, and databases. Scale a node at a time, upgrade in a single click, and move workloads between private and public cloud — on open standards, with no lock-in to anyone else's roadmap or price list.

No lock-in

Hybrid by design

1-click ops

60%

Lower 3-year TCO

\$0

Separate hypervisor license

Zero

Production downtime cutover

1-click

Upgrades & scaling

WHAT BECOMES POSSIBLE

When the platform works for you — not the other way around — your roadmap opens back up.

- **One unified platform** — VMs, Kubernetes, files, objects, and databases on a single fabric.
- **True hybrid** — burst to public cloud or repatriate, with no re-architecture.
- **One-click operations** — upgrades, scaling, and DR without maintenance weekends.
- **Hypervisor included** — AHV ships with the platform; nothing extra to renew.
- **Linear scale** — add a node, get more compute and storage. No forklifts.
- **White-glove SLA** — Stellar builds, runs, monitors, and supports it 24x7x365.

THE BOTTOM LINE

Less spent, more possible. A modern private cloud you actually own — built on Nutanix, run by Stellar, free of the licensing and lock-in you've been carrying.

See what you'd stop paying for.

DE-RISKED MIGRATION · STELLAR-ORCHESTRATED

Migration is the only reason you've stayed. So we removed it.

Most teams already know they're overpaying for a platform that's getting harder to live with. What keeps them there is the fear of moving. **Stellar takes that on for you** — a phased, fully tested migration with a validated rollback at every step and no production downtime. The risk becomes ours to manage; the savings become yours to keep.

HOW STELLAR MOVES YOU — WITHOUT THE DRAMA

1

Assess

We inventory your estate, map every dependency, and model your true 3-year TCO — so the decision is built on numbers, not guesswork.

2

Design

A right-sized Nutanix cluster, network and security architecture, and clear success criteria — reviewed and signed off before anything moves.

3

Migrate

Phased, side-by-side cutover. Workloads are validated on the new platform with a tested rollback at every step. Zero production downtime.

4

Optimize

Stellar tunes, monitors, and supports the environment 24x7x365 — and keeps right-sizing it so you never pay for headroom you don't use.

THE HONEST COMPARISON

The model you're on, and the model you deserve.

THE LEGACY STACK

Renting your own infrastructure

- ✗ Per-core licensing that resets the rules at every renewal
- ✗ Separate bills for the hypervisor, management, and storage
- ✗ Forklift upgrades and maintenance weekends
- ✗ Migrations you keep postponing out of fear
- ✗ Locked to one vendor's roadmap and price list

THE RESULT

Rising cost, falling control.

STELLAR + NUTANIX

Owning what comes next

- ✓ **Predictable, consumption-aligned economics** that scale with you
- ✓ **One platform** — hypervisor, management, and storage included
- ✓ **One-click upgrades** and scaling, with no downtime
- ✓ **A migration Stellar de-risks and runs** end to end for you
- ✓ **Freedom** to run and move workloads anywhere, on open standards

THE RESULT

Lower spend, full control.

Figures are directional and depend on workload profile and term. *Stellar will model your specific environment in a free TCO and migration assessment.*
